

# YOU HAD ME AT SMILE!

**THE MISSING LINK IN THE RESTORATIVE WORKFLOW IS HERE! The Bellus 3D Dental Pro provides a powerful, easy-to-use 3D face scanning solution that puts the detailed scan and design software together to enhance communication between the dentist, the lab, and the patient.**

## FOR THE DENTIST

Patient comfort is enhanced by the use of intra oral scanners. A 3D face scan used with the scanned models will continue to set your dental office apart from other offices:

- Most patients will enjoy seeing the 3D image generated in less than 30 seconds.
- The app, with the aligned scanned models, will allow you to easily create a new smile for the patient. Visualization motivates case acceptance.
- Help your labs succeed by sending them the virtual patient.
- Patient documentation is critical as protection for the business. A variety of 2D photographs and 3D face scan will help support your treatment. ExoCad and other popular dental scanner software.

## FOR THE LAB

Have the patient in the lab - virtually:

- Integrate with 3Shape, ExoCad and other popular CAD software.
- Align the 3D face scans with scanned models and CBCT scans.
- Dynamically position 3D aesthetic guide planes following anatomy of the patient's face.

*Preliminary studies of comparable face scanning technologies indicate that the overall "best fit" to a gold standard 3D capture device was the Bellus 3D.*

*Dr. Gerald T. Grant, Professor, Interim Assistant Dean Advanced Digital Technologies, University of Louisville School of Dentistry*

*Bellus3D Dental Pro face scanning system has become an integral part of our digital diagnostic and restorative treatment planning. It is the missing link we have all been waiting for.*

*Lee Culp, CDT, Sculpture Studios/Sculpture Academy, Cary, NC*
